1. INSTALLATION

1.1 Framing & Fastening
1.2 Surface Clearances
1.3 Installation Procedure
**INSTALLATION**

**Framing & Fastening**

**PRIMA® WeatherClad** can be installed either on timber or steel framing. A 35mm minimum stud width is required for both timber and steel frames. Only seasoned timber frame should be used. The steel frame must be in the BMT (base metal thickness) range of 0.55 to 1.6mm. Stud spacing kept at maximum of 600mm.

**PRIMA® WeatherClad** can be fixed with concealed and exposed/face fastening. The face nail will need to be pre-drilled on the upper board prior to nailing. The fasteners used for timber and steel framing are as Table 1 below:

</table>

For fastening to timber, the minimum edge distance to the end of the board is 20mm and 50mm for hand and gun nailing respectively. Refer Figure 1 and 2 for concealed and exposed fastening.
**Surface Clearances**

Provide a minimum of 150mm ground clearance between the bottom edge of PRIMAalpha® WeatherClad (or starter strip) and the earth as shown in *Figure 3*. The plank must be overhang at the bottom plate on a concrete slab by 20-50mm. Maintain a minimum of 50mm clearance between PRIMAalpha® WeatherClad and roofs and decks, refer *Figure 4*.

Do not install external cladding such that it will remain in contact with water and ground.

---

**Figure 4: Soffit Detail**
Installation Procedure

These steps provide a general guide for installation of PRIMA alpha® WeatherClad siding:

1. Ensure product is of acceptance quality and dry prior to installation.
2. Ensure framing is true and align prior to fixing of PRIMA alpha® WeatherClad.
3. Apply weather barrier over the frame work for external application.
4. Fix flashing at all internal and external corners and head of openings such as doors and windows.
5. Secure a starter strip along the bottom plate.
6. Use a water level to locate the top edge of the first course of the siding.
7. Fix the first siding starting from external corner. Fasten the bottom edge of the siding to each stud or bottom plate through the starter strip, refer Figure 3.
8. Fix the balance of the sidings of first course around the building.
9. The horizontal lap of PRIMA alpha® WeatherClad must be at 30mm minimum.
10. Before fixing the second row of siding, calculate the overlap so a near full width of siding will finish at the top of the building.
11. Use a piece of timber or plank to fabricate a lap gauge to ensure the siding installation is level and uniform coverage.
   Check level occasionally.
12. The ends of PRIMA alpha® WeatherClad are joined off-stud by means of tongue and groove edges. The tongue and groove joints must be at minimum of 100mm from the side of a stud, refer Figure 5. Joints must be staggered by a minimum of 600mm from the adjacent joints, refer Figure 6.
13. Flexible sealant must be applied in the tongue and groove joint during the installation.
WARRANTY

Hume Cemboard Industries Sdn Bhd ("the Company") warrants that it will at all times ensure that the products referred to herein ("the Products") shall be supplied by it to the purchaser free of any manufacturing defects and defective materials used in their manufacture.

In the event and if contrary to this assertion the Products prove to be defective, whether as a result of manufacturing defects or arising from the Company's use of defective materials, the Company will supply replacement Products. The Company shall, however, have the option and may choose to reimburse the purchaser the purchase price of the Products instead. The Company shall not be liable for any economic or consequential losses arising from any use of defective Products.

This warranty shall be void unless the purchaser has, in its handling and installation of the Products, complied with the recommendations contained in this brochure and other good building practices expected of a reasonable purchaser.

ADVISORY NOTE

Successful installations of Hume Cemboard Industries Sdn Bhd’s Products depend on a large number of factors that are outside of the scope of this brochure. Particular design, detail, construction requirements and workmanship are beyond the control of the Company. As such, Hume Cemboard Industries Sdn Bhd’s warranty does not extend to non-usability of Products or damage to Products arising from poor or defective designs or systems or poor quality of workmanship in the installation of Products.
