

FRONTIER BARN DOORS

SLIDING BARN DOOR SYSTEM

Version No: 5

THE PERFECT BALANCE OF STYLE AND FUNCTIONALITY

FRONTIER

BARN DOOR SLIDING SYSTEM

PERFECT FOR BIG OPEN SPACES

Barn doors are not just for barns, from the countryside these wide sliding doors have entered modern houses to become popular interior decor pieces. From cosy hide away bedrooms to rustic home office doors and unique wardrobe solutions, the Frontier sliding system is the perfect room divider.

FRONTIER

BARN DOOR SLIDING SYSTEM

FRONTIER TRACK SYSTEM

FEATURES:

- Easy to install
- Perfect for DIY
- High quality powder coat finish
- Quiet operation on nylon wheels

The Frontier Barn Door Sliding System incorporates an architecturally designed track system of the highest quality. The Frontier range offers a classic barn door look with exposed steel straps. Nylon wheels allow for smooth running along a flat bar track.

PRODUCT DETAILS

Material	Steel
Track Length	2000mm
Door Thickness	35-40mm
Maximum Door Width	1000mm
Maximum Opening Width	900mm (square set)
Maximum Door Weight	80kg
Finish	Black Powder Coat
Application	For doors up to 1000mm wide only. 2 Kits required for double door installation.
Fixing	Frontier Sliding System includes: Fixing screws to suit masonry and plasterboard walls. Tracks are pre-drilled.
To calculate door size	Height = Opening Height + 50mm Width = Opening width + 100mm

FRONTIER TRACK AND FITTINGS

(GST Additional)

2.0M TRACK & FITTINGS	Suits doors up to 1000mm wide - 1 Door (Single)	
2.4M TRACK & FITTINGS	Suits doors up to 1200mm wide - 1 Door (Single)	
3.0M TRACK & FITTINGS	Suits doors up to 1500mm wide - 1 Door (Single)

BARN DOOR SLIDING SYSTEM

INSTALLATION INSTRUCTIONS

IMPORTANT: BEFORE YOU BEGIN

This guide is designed to install a **1000mm** wide door onto a typical **900mm** square set opening. Some changes may be required depending on your situation. Read instructions fully before starting the installation of your barn door. Not following the installation instructions can cause the unit to work in an unsafe manner and cause injury.

The Frontier Barn Door Sliding System has been designed to work as a total system. Any modification to the door or the hardware will void the warranty and may cause the unit to work incorrectly.

When installing directly into a **non-concrete wall**, do not attempt to fix the track solely to the plasterboard or any wall surface as this may not support the weight of the track and mounted door. The track must be installed onto a piece of solid wood blocking (mounting board) using mounting screws.

Ensure the mounting board is secured into the structural surface. Use a stud finder where necessary to locate studs and secure safely. Typical mounting board should be a 2100x92x18mm solid timber board (mounting board and screws are not included).

How to install Frontier Barn Doors Sliding System Video:

HUME SAFETY
work safe - home safe

TRACK COMPONENTS

TOOLS NEEDED

FRONTIER

BARN DOOR SLIDING SYSTEM

1. ATTACH THE ROLLERS TO DOOR

Face mount roller (x2)

- 1.1. Mark the first hole 90mm from the side edge and 40mm down from the top edge of the door with a pencil (Figure 1).
- 1.2. Mark the second hole 90mm further down from the first hole (Figure 1).
- 1.3. Pre-drill both holes using a 10mm drill bit (Figure 1).
- 1.4. Using a spanner, fix the roller in place. Ensure the roller is secure and straight on the door (Figure 2).
- 1.5. Repeat this process for the other roller.
- 1.6. Go to STEP 2

(Figure 1)

(Figure 2)

2. ANTI-JUMP BLOCK INSTALLATION

Anti-jump block and screws (x2)

- 2.1. Measure and mark 35mm from the edge of rollers and 7mm from the face of the door.
- 2.2. Pre drill using a 3mm drill bit and fix anti-jump blocks using screws provided.

NOTE: The hole for the anti-jump blocks should be offset from the centre of the door so the block can be rotated out of the way when hanging the door on the track.

- 2.3. Go to STEP 3

FRONTIER

BARN DOOR SLIDING SYSTEM

3. MEASURE AND MARK FOR TRACK LOCATION

- 3.1. Using a ladder, tape measure and level, find the **centre line** position for the track by adding 43mm to the door height. Measure from the floor up and mark with a pencil.
- 3.2. For a **900mm** opening, the "Start Location" of the track is **75mm** from the edge of the opening. Measure **75mm** from the edge of the opening and mark "Start Location" of track on the **centre line**.

NOTE: If your opening is **less than 900mm** use the following formula to find the "Start Location" of track:

$$(1000 - \text{Opening Width}) / 2 + 75 = (x)$$

Measure (x) from the edge of the opening and mark "Start Location" of track on the **centre line**.

- 3.4. For fixing track to a **CONCRETE WALL** wall [Go to STEP 4](#)
- 3.5. For fixing track to a **NON-CONCRETE WALL** wall [Go to STEP 6](#)

4. CONCRETE WALL: WALL PREPARATION

2m Track (x1)

- 4.1. Position the track centred on the "Start Location" and ensure track is level.
- 4.2. Use the track as a template and mark mounting hole locations with a pencil.
- 4.4. Pre-drill the concrete at marked locations using a 10mm masonry drill bit.
(TIP: Temporarily install track with one end bolt. This will create a pivot point to easily level the track. Mark the rest of your holes)
- 4.5. [Go to STEP 5](#)

FRONTIER

BARN DOOR SLIDING SYSTEM

5. CONCRETE WALL: MOUNTING THE TRACK

5.1. Install anchors into holes using a hammer.

5.2. Install track with bolts, washers and spacers using a spanner.

5.3. Slide door stoppers on both ends of the track.

Use Allen key provided to tighten.

5.4. Go to STEP 10

6. NON-CONCRETE WALL: MARK TRACK HOLES ON MOUNTING BOARD

NOTE: Mounting board and screws not supplied.

6.1. On a flat surface, centre the track on the mounting board (ensure the track is straight on the board).

6.2. Mark start of track and track hole locations onto mounting board with a pencil.

6.3. Go to STEP 7

FRONTIER

BARN DOOR SLIDING SYSTEM

7. NON-CONCRETE WALL: ATTACH THE MOUNTING BOARD TO WALL

- 7.1. Use a stud finder to find the framing material (studs) behind the wall and mark their locations.
- 7.2. Position the mounting board on the wall ensuring it is level and centred on the centre line. Be sure to line up the start mark on the mounting board with your "Start Location" - not the edge of the mounting board.
- 7.3. Fix mounting board through wall into studs.
(TIP: Locate and install one screw in the middle of the mounting board first. This will secure the board so you can move/pivot the free end and ensure the board is level as you install other screws.)
- 7.4. Go to STEP 8

8. NON-CONCRETE WALL: PRE-DRILL MOUNTING BOARD

- 8.1. Drill pilot holes for track bolts into mounting board at marked locations from Step 6.
(TIP: Temporarily install track with one bolt in the middle. This will create a pivot point to easily level the track. Drill the rest of your holes)
- 8.2. Go to STEP 9

FRONTIER

BARN DOOR SLIDING SYSTEM

9. NON-CONCRETE WALL: ATTACHING TRACK TO MOUNTING BOARD

9.1. Install track with bolts, washers and spacers using a spanner.

9.2. Slide door stoppers on both ends of the track.
Use allen key provided to tighten.

9.3. Go to STEP 10

10. HANGING DOOR AND ADJUSTING STOPPERS

Ensure door stoppers are fixed firmly in place before hanging door.

10.1. Ensure anti-jump blocks are in the unlocked position (A).

10.2. Place assembled door with rollers onto track.

10.3. Rotate the anti-jump blocks to locked position (B).

10.4. Slide door back and forth to test how well the door covers the opening. Reposition stoppers as needed.

10.5. If less travel of the door is required, the stoppers can be moved inside end mounting bolts.

(TIP: If needed - remove the end mounting bolts and spacers, slide the stopper to the new location and reinstall bolt and spacer)

10.6. Go to STEP 11

FRONTIER

BARN DOOR SLIDING SYSTEM

11. FLOOR-MOUNTED DOOR GUIDE INSTALLATION

- 11.1. With door fully in the open position and hanging straight - position the floor mount door guide inside groove in the bottom of the door (see figure below for placement).
- 11.2. Make sure guide is properly placed and while holding guide in position slide the door back. Mark location of guide.
- 11.3. Pre-drill and attach guide with supplied screws. If needed, supplied anchors can be used.
- 11.4. To fasten guide, the door may need to be removed.
- 11.5 Go to STEP 12

12. FINAL CHECK OF STOPPERS AND ANTI-JUMP BLOCKS

- 12.1. Check to see that stoppers are properly located and tightened in place.
- 12.2. Check to see anti-jump blocks are rotated to the LOCKED position before operating the door.
